Botanical Name	Brugmansia
Common Name	Angel's Trumpet Flamenco
Mature Size	10-12'
Bloom Color	Deep Salmon Peach Pink
Bloom Period	Perpetual Cyclical
Bloom Form	Very Large 14" Upside Down Trumpet
Water	Heavy
Light	Full Sun/Light Shade
USDA Zone	9-11
Fragrance	Moderate, Strongest @ Night
Uses	Tree Like Shrub
Special Features	Unusual Showy Bloom

Brugmansias, or Angel's Trumpets grow up into large multi stemmed tree like bushes. The bloom is very unique and showy, and they are very interesting and rewarding to grow.

Angel's Trumpets flower in cycles several times each year. The flowers are with large, highly fragrant trumpet shaped blooms that hang upside down and cover the bush for several weeks.

Flamenco is a quick, upright cubensis hybrid developed by French hybridizer, Herta Blin that blooms with exceptionally large, 14 inch glossy salmon toned pink trumpets with a soft muted white to pastel pink throats. The buds open slowly and last several days.

Brugmansias lend a very romantic, elegant, 'Wisteria Lane' sort of look and feel to any garden. The fragrance is at it's peak at night, so near the pool, patio, porch, or any other area where you spend time outdoors in the evening is a good placement. However, all parts of the brugmansias are considered toxic, so bear this mind when deciding placement.

For the best results with Brugmansia Angels Trumpet Flamenco

- Repot the starter and allow it to grow larger before setting out into the landscape

When it has grown large enough to plant:

- Plant in well draining soil
- Provide adequate irrigation until very well established
- Allow adequate space for Angel's Trumpet to grow and mature.
- Feed a good quality bloom boosting plant food 2x yearly
- Prune lightly after flowering for shape
- Protect from frost and freeze.

Care of Your New Brugmansia or Datura Plant

Here are a few basic guidelines for handling and caring for your new Brugmansia or Datura plant:

Check the recommended USDA Zone Range for the plant. Many gardeners are able to successfully grow plants outside their recommended Zones, but this is dependent upon providing the type of environment and care the plant needs.

Direct planting of 4 inch starter size plants directly into the landscape is not recommended. So, for the best results with your new plant, we suggest that it be repotted into a larger pot and allowed to grow larger until the new pot has filled with roots before setting out.

- Immediately unpack, remove the wrappings and shipping gel.
- Repot the new plant into a 10 inch to 14 diameter pot that can drain easily and thoroughly.
- Use a good quality commercial potting media.
- Apply a high quality, slow release plant food according to the label directions. Do not use hot, all chemical fertilizers like 6-6-6 or 10-10-10. Our Bloom Booster is recommended.
- Locate so that the plant can receive high, full spectrum light for several hours daily, but is protected from hot, direct afternoon sun.
- Maintain consistent and uniform moisture in the soil. Take care not to over water.
- Packing crystals may be reused to conserve water, but do so with caution as they hold 6000 times their weight in water. If reusing the crystals, mix and incorporate them thoroughly throughout the potting media.
- Be sure the pot can drain excess water out quickly and thoroughly, and that the bottom of the pot does not sit submerged in water for more than a day.
- Supplemental feeding with a water soluble plant food (such as Miracle Grow) every 2-3 weeks according to the label directions is beneficial, especially in climates where the growing season is short.
- Prune or pinch lightly and often when the plant is young and actively growing to strengthen the central stalk and encourage branching, build uniform shape, and to avoid accidentally delaying bloom by pruning away growth that is about to flower.
- Monitor for signs of disease or insects and treat accordingly.
- Protect from frost and freeze.

Brugmansias, Daturas, and many other tropical and subtropical plants can be grown as potted plant indefinitely and can be successfully wintered over indoors in colder climates, so long as they are moved indoors well ahead of temps into the 30°F's, are maintained in warm environment (minimum 40°F) with adequate, full spectrum light, and consistent soil moisture is maintained.

When the new pot has filled with roots, and ready to be planted, here are a few helpful hints for growing outdoors within the recommended USDA Zone Range of 9, 10 and 11.

- Plant in fertile, well draining soil. Amend with high quality compost as is needed. Neutral to slightly acid PH is preferred.
- Locate in lightly dappled shade.
- Feed a high quality Bloom Booster Fertilize with the initial planting and yearly in the early Spring thereafter.
- Supply supplemental irrigation.
- Prune lightly after flowering for shape and to control size.
- Protect from frost and freeze.
- Daturas should be pruned lightly after flowering to extend blooming and life cycle. Allowing seed to mature on the plant may hasten the end of it's life cycle.
- All parts of both Brugmansias and Daturas are considered toxic*
