

## Emerald Goddess Gardens emeraldgoddessgardens.com

- Botanical Name: Brugmansia
- Common Name: Angel's Trumpet Full Rosea Magic
- Plant Family: Solanaceae
- Mature Size: 8 – 12 ft
- Growth Habit: Tree-like Shrub
- Bloom Color: Pink
- Bloom Form: Double or More
- Bloom Time: Cyclical
- Water Needs: Heavy
- Light Needs: Full Sun to Partial Shade
- Recommended Zones: 9, 10, 11
- Key Features: Unusual Showy Bloom
- Suggested Uses: Garden specimen, fragrance production
- Growers Notes : **All parts are considered toxic.**

**Brugmansias, or Angel's Trumpets**, as they are commonly called, grow up to make large multi stemmed semi-trees that bloom in cycles of large, upside down hanging, trumpet shaped flowers.

They are easy, very rewarding to grow, and make interesting garden specimen plants. Not only do Angel's Trumpet lend a very romantic, elegant, 'Wisteria Lane' sort of look in a tropical to subtropical landscape, but the flowers are highly fragrant, especially at night and attract butterflies & hummingbirds as well.

Generally they come in shades of pink, peach, white and yellow, and will bloom a least 2 or 3 times each year, although the cycle is unpredictable and seems to be controlled by temperature light.

**Full Rosea Magic** is a hybrid that was released in 1999 after its creation by Anne Kirchner-Abel. Its full, double flowers are a stunning array of soft pink colors and hang heavy from branches during bloom cycles. Use as a focal point, accent, transition, or grow in a large garden pot.

Planting of 4 inch size starter plants or plugs directly into the landscape is not recommended, so for the best results with your new tropical hibiscus plant, it should be repotted and allowed to grow larger before setting in a landscape in Zones 9 to 11.

- Plant in well draining soil.
- Locate in full sun
- Provide supplemental irrigation until well established.
- Prune lightly after flowering to encourage branching and shape.
- Feed a good quality bloom boosting fertilize with the initial planting and yearly thereafter.
- Protect from frost and freeze until very well established.

If you don't know your USDA Planting Zone, you can check the map on our website site at [emeraldgoddessgardens.com](http://emeraldgoddessgardens.com)

Toxicity information generally known within the horticultural trade is provided for reference purposes only. Experts in the field of plant toxicology should be consulted when detailed or emergency information is needed. **This plant is intended for use as an ornamental, decorative item only. Emerald Goddess Gardens does not recommend nor endorse any other uses.**

## **Care of Your New Brugmansia or Datura Plant**

Here are a few basic guidelines for handling and caring for your new Brugmansia or Datura plant:

Direct planting of 4 inch starter size plants directly into the landscape is not recommended. So, for the best results with your new plant, we suggest that it be repotted into a larger pot and allowed to grow larger until the new pot has filled with roots before setting out.

- Immediately unpack, remove the wrappings and shipping gel.
- Repot the new plant into a 10 inch to 14 diameter pot that can drain easily and thoroughly.
- Use a good quality commercial potting media.
- Apply a high quality, slow release plant food according to the label directions. Do not use hot, all chemical fertilizers like 6-6-6 or 10-10-10. Our Bloom Booster is recommended.
- Locate so that the plant can receive high, full spectrum light for several hours daily, but is protected from hot, direct afternoon sun.
- Maintain consistent and uniform moisture in the soil. Take care not to over water.
- Packing crystals may be reused to conserve water, but do so with caution as they hold 6000 times their weight in water. If reusing the crystals, mix and incorporate them thoroughly throughout the potting media.
- Be sure the pot can drain excess water out quickly and thoroughly, and that the bottom of the pot does not sit submerged in water for more than a day.
- Supplemental feeding with a water soluble plant food (such as Miracle Grow) every 2-3 weeks according to the label directions is beneficial, especially in climates where the growing season is short.
- Prune or pinch lightly and often when the plant is young and actively growing to strengthen the central stalk and encourage branching, build uniform shape, and to avoid accidentally delaying bloom by pruning away growth that is about to flower.
- Monitor for signs of disease or insects and treat accordingly.
- Protect from frost and freeze.
- Prune Daturas after flowering to prevent plants from setting seed and thereby increasing vigor and longevity.

Angels Trumpets and many other tropical and subtropical plants can be grown as potted plant indefinitely and can be successfully wintered over indoors in colder climates, so long as they are moved indoors well ahead of temps into the 30°F's, are maintained in warm environment (minimum 40°F) with adequate, full spectrum light, and consistent soil moisture is maintained.

When the new pot has filled with roots, and ready to be planted, here are a few helpful hints for growing outdoors within the recommended USDA Zone Range of 9, 10 and 11.

- Plant in fertile, well draining soil. Amend with high quality compost as is needed. Neutral to slightly acid PH is preferred.
- Locate in lightly dappled shade.
- Feed a high quality Bloom Booster Fertilize with the initial planting and yearly in the early Spring thereafter.
- Supply supplemental irrigation.
- Prune lightly after flowering for shape and to control size.
- Protect from frost and freeze.
- Daturas should be pruned lightly after flowering to extend blooming and life cycle. Allowing seed to mature on the plant may hasten the end of it's life cycle.
